

The Printing Ink Company, Rycoline Inc., has served the printing industry for over 40 years offering a full line of high quality sheet-fed printing inks. Our manufacturing headquarters is located just north of Toronto, Ontario. We are proud to be Canadian and we are committed to protecting our environment.

We are constantly working on the best manufacturing techniques to reduce emissions to the air, water and land. We look for ways to conserve water and energy. We strive to reduce the levels of waste that are produced by disposing such waste in a safe and responsible manner. Whenever possible, we make use of recycling or reusing any waste that may be generated.

Our research and development department is responsive to our customers' concerns for the environment and we are constantly striving to improve our printing ink and their impact on the environment through the printing process.

Further benefits of using environmentally friendly inks are increased demand for renewable resources like linseed oil, soya oil and wood rosin. All of which are derived from vegetable matter. Use of these types of products precludes the use of petroleum derived compounds. These inks dry by oxidization and are readily de-inked to improve paper recycling. Our inks are made to run with low V.O.C. alcohol-substitutes and fountain solutions.

We believe that The Printing Ink Company's inks will satisfy your customer's desire to be a part of the concern for the environment.
